ADITYA ANIL KOKATE

Generative AI · LLM Applications · Data Science · Quality Assurance & Data Entry · Full-Stack Development

dev.adit01@gmail.com | +91 86238 86973 | github.com/Aditk1 | linkedin.com/in/aditya-kokate-6654b4248 | Pune, Maharashtra

PROFESSIONAL SUMMARY

Final-year B.Tech Computer Engineering graduate (SPPU, 2026) with strong attention to detail and hands-on experience in data entry, data validation, and QA/testing across spreadsheets, web, and app platforms. Authored audit and validation scripts and manual test cases to catch and correct data errors across a 10-layer production AI pipeline for a live e-commerce client, and independently cleaned, cross-verified, and entered large volumes of raw data for downstream reporting. Comfortable working across Google Sheets/Excel, internal tools, and task boards (Asana), reading and interpreting data before acting on it rather than just copying it across. Also builds full-stack web/app platforms (Python FastAPI, React), giving practical familiarity with content publishing, checkout flows, and how bugs surface across a product. Co-authored a research paper accepted at ICT4SD 2026 (Goa). Targeting fresher roles in Quality Assurance/Testing, Data Entry & Data Processing, Data Analytics, or Full-Stack Development.

TECHNICAL SKILLS

Quality Assurance & Data Entry: Manual & Functional Testing (Web/App/Checkout), Test Case Design & Execution, Bug Reporting & Ticketing, Data Validation & Accuracy Auditing, High-Volume Data Entry, Spreadsheet-to-Spreadsheet Data Processing, Data Cleaning & Deduplication, Task Boards (Asana), Documentation, Attention to Detail

Spreadsheets & Tools: Google Sheets, Microsoft Excel, Asana, Postman

Agentic AI & LLMs: LLM API Integration (Gemini, OpenAI), Prompt Engineering, RAG Pipelines, LangGraph, Agentic Workflow Design, NLP (Tokenization, Text Cleaning), Transformer Architecture

Data Science & ML: Supervised Learning (Classification, Regression), Scikit-learn, Feature Engineering, Hyperparameter Tuning (GridSearchCV), EDA, Statistical Analysis, Pandas, NumPy

Computer Vision & AI: Google Gemini Vision, Vertex AI Imagen 3, rembg U-2-Net, DINOv2 Embeddings, Fal.ai FLUX Inpainting, OpenCV

Full-Stack & APIs: Python FastAPI, Node.js, Express.js, React 18 + Vite, REST APIs, MongoDB, MySQL, SQLAlchemy

DevOps & Cloud: Git/GitHub (branching, PRs, CI/CD concepts), Docker (fundamentals), Linux CLI, Bash Scripting, GCP (Vertex AI, Cloud Run), Microsoft Azure

Languages: Python, JavaScript/TypeScript, SQL, Java, C++

Tools: Jupyter Notebook, VS Code, Postman, Neo4j, ChromaDB, GitHub

WORK EXPERIENCE

Generative AI Developer Intern · **NavonLabs Pvt Ltd** *Apr 2026 – Oct 2026 (Ongoing)*

Full-Stack Generative AI Developer Program · Hybrid (Nashik + Zoom) · Reporting to Amit Lulla, Founder

- Building production-grade Agentic AI applications using LangGraph, RAG pipelines, and LLM evaluation frameworks under direct mentorship from a practising enterprise AI engineer.
- Developing a live capstone AI project with real-world architecture and deployment patterns, certified by NavonLabs Pvt Ltd on completion.
- Training in Python-first engineering practices: prompt design, agentic workflow orchestration, and multi-step LLM system evaluation.
- Performed QA on LLM pipeline outputs — designing evaluation test cases, validating generated data against expected results, logging defects/tickets for developers, and tracking progress day to day.

AI & Full-Stack Development Intern · **Edunet Foundation (EY GDS & AICTE)** *Dec 2024 – Jan 2025*

- Deployed a production-ready MERN stack application in a Linux environment, managing end-to-end build, release, and rollback cycles.
- Reduced MongoDB query latency by applying indexing strategies and aggregation pipeline tuning on a live application dataset.
- Built JWT-based authentication and a secure REST API layer; enforced codebase hygiene via Git branching, code reviews, and pull request workflows.
- Integrated a third-party payment gateway into the application backend, maintaining API stability under concurrent load.
- Executed functional testing and manual QA passes across web app modules — including a third-party payment/checkout flow — prior to release, documenting issues and verifying fixes.

KEY PROJECTS

Saree Catalogue Intelligence Platform · **Confidential Client × Fuse AI × NavonLabs** *Dec 2025 – Present*

- Architected a 10-layer Generative AI pipeline for automated textile catalogue generation: background removal (rembg U-2-Net), image inpainting (Fal.ai FLUX), product description generation (Gemini Vision), and multi-angle image synthesis (Vertex AI Imagen 3).
- Built a React 18 + Vite frontend with a side-by-side comparison lightbox; Python FastAPI + SQLAlchemy backend; integrated DINOv2 embeddings for semantic product search.
- Authored dedicated audit and validation scripts to QA-test pipeline outputs at each of the 10 layers — checking source data for accuracy, verifying and correcting errors, and catching the smallest inconsistencies before catalogue publishing.
- Delivered a full end-to-end investor demo — covering UI, API, and AI pipeline — under a 3-hour sprint deadline.

eduRAG — GraphRAG Platform for Educational QA · **AISSMS IOIT, SPPU** *2025 – 2026*

- Designed and built a multi-hop question-answering system using GraphRAG (Neo4j + ChromaDB + FastAPI + React); research paper accepted at ICT4SD 2026, Goa.
- Implemented confidence-scored KG triple extraction, Confidence-Weighted Leiden community clustering, and adaptive LLM graph-traversal strategies to improve answer fidelity on complex queries.

Sales Data Analytics & BI Dashboard · *2024*

- Performed in-depth EDA on a structured sales dataset using Python (Pandas, Matplotlib) and SQL; surfaced revenue trends, customer segments, and profit margin drivers.
- Prepared and sorted raw sales records into a template spreadsheet, manually entering, cleaning, and cross-verifying data against source documents for accuracy prior to analysis.
- Produced structured analytical reports converting statistical findings into concrete business recommendations ready for stakeholder presentation.

Travel Planner — MERN Stack Application · *2023*

- Built and deployed a full-stack travel planning application with dynamic routing, MongoDB integration, and RESTful APIs; version-controlled via Git with a clean branching strategy.

EDUCATION

B.Tech – Computer Engineering *2026*
AISSMS Institute of Information Technology, SPPU | CGPA: 6.75 / 10
Relevant Coursework: AI, ML, NLP, DBMS, Data Structures, OS, Computer Networks, Cloud Computing, Linux Administration

HSC – Science Stream *2022*
G.D. Sawant Arts, Commerce & Science College, Nashik Road | 65%

SSC *2020*
St. Philomena Convent High School, Nashik Road | 80.80%

CERTIFICATIONS

- AI-900 – Microsoft Azure AI Fundamentals (Azure OpenAI, Cognitive Services, deployment fundamentals)
- Building Modern Web Applications with MERN Stack – EY GDS & AICTE
- NPTEL – Joy of Computing Using Python
- MKCL – Mobile App Development & UI with HTML/CSS
